Microsoft Dynamics™ SL

BENEFITS

- Suit your business needs**
 Define various default values, selection options, and control information, including general ledger posting options, data retention requirements, and entry of cleared amounts or transactions during reconciliation. Set up items that affect future cash balances to strengthen your ability to project cash flows.
- Control account data**
 Access current cash balance information instantly while entering transactions, to help you track what is in the bank on a daily basis. Transferring funds between different cash accounts is easy, so you can manage your money effectively while accurately displaying critical information at a moment's notice.
- Simplify processes**
 Reconcile bank statements easily according to your schedule and your business demands. Assemble daily cash balances from subsidiary databases into a "consolidated" database, so cash account balances for the entire organization are available to view in one application.
- Manage and track cash data**
 Designate accounts as active or inactive, control the status of transaction batches, and determine which accounts and transaction types are valid. All transactions that affect cash are tracked, creating a complete audit trail.
- Mine data effectively**
 Extract complete audit trail information for any cash management transaction using a variety of standard reports and extended reporting options. To help ensure that each transaction is properly documented, print automatic batch control reports for all entries.

Take the guesswork out of cash accounting, gain instant access to your current cash balance, and automate bank reconciliation. Powerful and integrated, Microsoft Dynamics SL Cash Manager is automatically updated when batches are released by other Microsoft Dynamics SL modules.

Company ID	Account	Subaccount	Current Balance	Currency ID	Bank Account Number
1	CAI	1000	4875282.62	USD	90348593939-4949

Designate accounts as active or inactive, and determine which accounts and transaction types are valid.

FEATURES

BENEFITS

Powerful Integration

Work with Microsoft Dynamics SL General Ledger and all subsidiary ledgers that impact cash balances. Use with Microsoft Dynamics SL Multi-Company, for example, and define a "central" company as the cash controller for subsidiaries.

Multiple Accounts Management

Integrate transactions into a streamlined activity to balance cash accounts between the bank statement, daily cash balance, and general ledger account balance. Up to 30 characters may be used for each bank account number.

Valuable Forecasting

Set up recurring items such as capital expenditures, bonuses, tax refunds, and stock proceeds that will impact future cash balances to project future cash flow. Multiple "what if" scenarios help you compare possible outcomes.

Cash Flow Prediction

Forecast cash flow for seven periods that you identify. Information is retrieved from both Microsoft Dynamics SL Accounts Payable and Microsoft Dynamics SL Accounts Receivable, open purchase orders, and any anticipated items entered in the Cash Flow Items screen.

Flexible Reconciliation

Reconcile bank statements quickly and easily from a central location and at any time of the month, including daily processing, through the Bank Reconciliation screen, which shows all related activity for a specified period.

Simplified Adjustments

Reconcile at the check/deposit level and easily enter transactions that affect cash but are not captured in other Microsoft Dynamics SL modules, such as bank service charges, wire transfers or other cash transaction types that you create.

Global Operations Management

Use with Microsoft Dynamics SL Currency Manager and work with cash accounts in banks around the world that use a variety of currencies. View balances in the account's native currency or your base currency.

Daily Balance Monitoring

Get immediate access to your current cash balance for individual cash accounts or a grand total of all accounts. Drill down to the detail transactions that make up the cash balance.

Electronic Data Import

Use the electronic bank transaction import feature to receive cleared check and deposit information from a bank (in a delimited ASCII file), then automatically clear these checks and deposits.
